Server-Side Web programming

Instructor: Robert Nicholson

Assignment #02

This is an individual assignment

Due: In one week at start of class
100 points max

Create a web page that uses JavaScript for interactive functions.

For your assignment, submit a folder containing:

- An html file
- A CSS file
- A Javascript file

Use local references in your html file.

Your folder name should include your last name and the assignment number, eg: `lastname-assignment-02`. ZIP the folder and upload in in the Canvas assignment.

Page Layout

Your page should look approximately like the page below. For this assignment, exact layout is not important – I'll be evaluating functionality.

Assignment 2

Add Two Numbers

First Number:

Second Number:

Total =

Change Text Style

Select Style:

This is the text to be styled

Objective of Program

The page will be made up of two forms, with JavaScript functionality for each.

Add Two Numbers

Allow the user to enter numbers in two fields. When the user clicks the **Add** button, the total of the two numbers should be displayed on the line below.

If either of the two fields does not contain a number, an error message should replace the “Total=” line.

Change the Style

Using a dropdown selector, allow the user to select Normal, Bold, Italic, or Bold Italic. When the user clicks the **Change Style** button, the selected style should be applied to the line below.

It should be possible for the user to use either form repeatedly, and the results should be updated.

Grading Rubric

Possible Errors May Occur In:		Points
File organization and Structure		20
Correct Functioning: Add Two Numbers		40
Correct Functioning: Styling Text		40
